

MUHAMMAD WAHAB

SOFTWARE ENGINEER — MOBILE & WEB APP DEVELOPER

Lahore, Pakistan | +92 316 2068007 | m.wahab2082@gmail.com | [Portfolio](#)

PROFESSIONAL SUMMARY

Software Engineer specializing in Flutter and full-stack JavaScript development (Node.js, Express, React, Next.js), with hands-on experience shipping multiple production mobile and web applications end-to-end — from Firebase-backed mobile apps to REST API integrations, AI-driven automation platforms, and CI/CD-driven deployments. Comfortable across the stack: mobile UI, backend services, relational/NoSQL databases, and multi-agent AI workflow design. Seeking to bring a builder's mindset and strong fundamentals in data structures, OOP, and Agile delivery to a growing engineering team.

TECHNICAL SKILLS

- **Languages:** Dart, JavaScript, Java, C++, C
- **Mobile Development:** Flutter (cross-platform iOS/Android), state management, Firebase integration
- **Web Development:** React.js, Next.js, HTML5, CSS3, EJS, Node.js, Express.js, REST API design & integration, GSAP, React Router
- **Databases:** PostgreSQL, MySQL, MS SQL Server, MongoDB, Firebase (Firestore), Supabase
- **AI & Automation:** Multi-agent AI system design, n8n workflow automation, Ollama (local LLMs), AI-driven CRM & pricing logic
- **Tools & Practices:** Git/GitHub, CI/CD pipelines, Agile/Scrum, Docker, Visual Studio Code, Android Studio, IntelliJ IDEA, Postman

Core Concepts: Data Structures & Algorithms, Object-Oriented Programming, Database Design, Operating Systems

EXPERIENCE

Junior Mobile & Web App Developer — ZMDM IT Solutions

March 2025 – June 2026 | Lahore, Pakistan

- Built and deployed multiple production mobile and web applications using Flutter, React, and Node.js, taking each project from initial architecture through client delivery.
- Set up CI/CD pipelines for the team's release process, reducing manual deployment steps and shortening the path from code merge to release.
- Integrated REST APIs and third-party services (including Firebase and WhatsApp Business messaging) to extend app functionality for client-facing products.
- Worked within cross-functional Agile teams — coordinating with designers and backend engineers — to deliver features aligned with client requirements and deadlines.

PROJECTS

- **Smart Solar App** (Flutter, Firebase) — Solar monitoring app enabling users to track panel performance and energy output in real time. Firebase powers live data sync so dashboards stay current as readings change. Built with Flutter for a streamlined, easy-to-navigate UI across iOS and Android.
- **Food Delivery App** (Flutter) — Restaurant ordering app that lets users browse menus and place orders which route directly through WhatsApp, cutting friction between browsing and checkout. Removes the need to navigate a separate in-app checkout flow. Built entirely in Flutter for a consistent cross-platform experience.

- **Shop IT — E-Commerce App** (Flutter) — Full shopping flow covering product discovery and browsing, cart and purchase, and order tracking after checkout. Designed to give users a complete, self-contained retail experience in one app. Built as a cross-platform Flutter application for iOS and Android.
- **SWIFT Drive — Car Rental App** (Flutter) — End-to-end car rental experience covering vehicle browsing, booking, and reservation management for users. Built to simplify the rental process from search through pickup. Delivered as a cross-platform Flutter app for iOS and Android.
- **ConX Orbit — Construction AI Marketing Website** (React, CSS Modules, React Router, GSAP) — Multi-page marketing website with a brand-aligned UI (forest/olive/gold), GSAP scroll storytelling, and interactive product, case-study, and partner pages built on a reusable content system.
- **AI-Powered Autonomous Sales Agency** (Next.js, Node.js, Supabase, n8n, Ollama, Docker) — Multi-agent AI sales platform simulating a full sales team — lead generation, cold calling, pricing, CRM, and payment collection — with an admin dashboard, approval workflow, and AI-controlled pricing.
- **POS System** — Point-of-sale platform built with a custom dashboard for sales agents to process transactions and manage daily store operations. Designed to give staff quick visibility into sales activity alongside their transaction workflow. Focused on a clear, task-oriented interface for day-to-day retail use.
- **Online Store** — E-commerce platform for browsing a product catalog, adding items to cart, and completing purchases through an online storefront. Built to give customers a straightforward path from discovery to checkout. Designed as a standalone online shopping experience.
- **Dating App** — Application for connecting and matching users based on shared interests and preferences. Supports the core profile creation, browsing, and matching experience typical of a dating platform. Built to give users a simple, focused way to discover and connect with others.
- **LMS Portal** — Learning management system portal supporting online course delivery and management. Gives instructors a way to organize and manage course content while students access and progress through materials. Built as a centralized portal for course-based learning.
- **Password Manager** — Application for securely storing, organizing, and retrieving credentials for multiple accounts in one place. Built to give users a single, centralized tool for password management instead of relying on memory or scattered notes. Focused on straightforward storage and retrieval.
- **SWIFT (Java)** — Social networking application built in Java, focused on core social features such as user profiles and connections. Built as a hands-on project applying object-oriented design to a real, working application from the ground up.

EDUCATION

Bachelor of Science in Software Engineering — *COMSATS University Islamabad, Lahore Campus*
September 2022 – June 2026

Intermediate — Pre-Engineering (Physics, Math, Computer Science) — *RYK-IBA College, Rahim Yar Khan*
August 2020 – May 2022

INTERESTS

Cricket • E-Games • Travel • Leadership
